

Murder at Mars 2014

Something pink and gruesome looking has been found in Field of Mars Reserve. Who is the victim? Who is the villain? Murder at Mars has a strong focus on problem solving, critical thinking and collaborative learning. Working in teams, students follow a clue seeking trail through the Field of Mars Reserve collecting evidence physically and recording it digitally with the help of an iPad to solve this mystery. Clues are supported through the use of multimodal text. Back in the 'lab', the students analyse the evidence and use research skills to present their case. The session concludes with creative group presentations of their findings.

Suitable for Stage 3 - Max 2 Classes - Supports Science K-10 and English K -10 - Cost \$16 per student
